Vladyslav Skopenko

Backend & AI Engineer · Python, LLM

Odesa, Ukraine · Remote · +380 63 193 40 48 · skopirka2k17@gmail.com · t.me/Skopilk · linkedin.com/in/vladyslav-skopenko · github.com/VladSkopenko · vladskopenko.github.io

2 LLM document pipelines shipped	**80+** specs for agent-driven development	**50,000 t** grain traded on the platform	**#1** backend contributor by commits and code

SUMMARY

Backend engineer who ships LLM features into a production B2B platform. At INBULK, a grain-trading and logistics platform: LLM document extraction measured by eval harnesses, domain tools for a LangChain assistant, and a spec-driven workflow with AI coding agents introduced to the team. 2.5+ years of commercial Python, top backend contributor, owner of the logistics domain. Spoke about AI in backend teams at a GoIT meetup.

EXPERIENCE

Backend Engineer (Python)

03/2025 – present

INBULK · formerly iCORN · Remote, Kyiv

B2B platform connecting grain traders, carriers, terminals and financial partners.

- **Port documents to laytime:** an LLM parses NOR and SOF documents into typed schemas, a deterministic event builder turns them into the laytime timeline, and an eval harness compares the result with a reference voyage.
- **Vessel certificates:** LLM extraction of statutory documents into validated Pydantic models behind a tested API.
- **AI assistant:** built most of the domain tools for the LangChain tool-calling assistant on OpenAI: orders, deals, warehouse, counterparties, market prices; AI orchestration kept out of domain services.
- **Agentic development:** introduced Claude Code with BMAD to the team: 80+ specs, tests-first implementation, multi-agent code review, permission allowlists for agents.
- **Data pipelines and infra:** grain price monitoring in Python and n8n: marketplace scrapers and Telegram channels via a Telethon service in Docker, one normalized schema, Slack alerts; GitHub Actions deploy over Tailscale.
- **Backend core:** logistics end to end (deliveries, truck and vessel voyages, waybills, laytime), 260+ of ~500 Alembic migrations, PostgreSQL analytics.
- **Performance and security:** waybill download from ~10 s to 0.2 s; OAuth 2.0 with Google, LinkedIn and Meta replacing Auth0; one-time tickets for WebSocket auth.

Software Developer (part-time)

03/2024 – 06/2026

Tekra · Remote

- Cross-platform desktop app in Python/PyQt6 with license-key generation and verification and Inno Setup installers.
- FastAPI services and automation bots; multithreading that cut the app's data-processing time.

GoIT · Data Science Mentor · 11/2024 – 02/2025: code reviews, workshops, one-on-one support for students.

Freelance · 05/2024 – 08/2024: Telegram shop bot for an Ayurveda store (aiogram, FastAPI, Monobank payments, KeyCRM).

SKILLS

AI / LLM	OpenAI API, LangChain (tool calling), structured extraction with Pydantic, eval harnesses, prompt design, Claude Code, BMAD, n8n
Backend	Python, FastAPI, SQLAlchemy 2.0 (async), Alembic, PostgreSQL, WebSocket, OAuth 2.0
Integrations	Telegram (aiogram, Telethon), S3, Google Maps API, Slack
Tooling	Docker, Docker Compose, GitHub Actions, nginx, Tailscale, Git, pytest (TDD), Postman
Frontend	React, TypeScript (fixes in the web app)

LANGUAGES

Ukrainian — native · **English** — B1 (Intermediate)

TALKS & COMMUNITY

"Who builds AI, and how to become one"

GoIT online meetup, speaker · 08/2026 · YouTube

AI in backend teams, a LangChain case study.

LinkedIn: 8.8K followers, posts on AI in development.

EDUCATION

Bachelor's degree, Finance, Banking and Insurance 2017 – 2021

Odesa National Economic University

Python Backend Developer program 2023 – 2024

GoIT

Capstone team lead; project voted best in the cohort.
